

Almazing Intelligent Management System

AI-Powered Payment & Finance Control

From Request. To Control. To Financial Intelligence.

A payment request looks simple. The financial reality isn't.

Behind one request: budget pressure, historical spending, existing commitments, risk, compliance, approval authority, payment readiness, and the need for an audit trail.

One controlled financial decision journey.

TRADITIONAL

AIMS

The full payment lifecycle stays intact.

12 governed stages, grouped into 5 phases — nothing skipped, nothing shortcut.

AI interprets. The system calculates.

AI INTERPRETATION

- Document understanding
- Financial risk signals
- Spending patterns
- Compliance indicators
- Plain-language explanation

SYSTEM CALCULATED

- Active budget
- Actual ledger
- Active commitments
- Available position
- Ledger impact on payment

$$\text{Available} = \text{Active Budget} - \text{Actual Ledger} - \text{Active Commitments}$$

Multiple perspectives. One evidence-backed assessment.

Human authority remains final.

AI assists decisions. Humans retain authority.

APPROVED ≠ READY FOR PAYMENT

AI NEVER APPROVES PAYMENTS

SEGREGATION OF DUTIES

Technical Admin does not equal Finance authority — access is not approval.

PAY-2026-000041 — a real request, start to finish.

PAYEE	DEPARTMENT	PURPOSE	TOTAL
BrightWave Media Sdn. Bhd.	Operations	Digital Marketing Campaign	MYR 18,500.00

THREE CLAIM ITEMS

Campaign Media Placement MYR 8,000.00	Creative Production MYR 6,500.00	Campaign Analytics Service MYR 4,000.00
--	-------------------------------------	--

WORKFLOW PROGRESSION

From payment workflow to real financial visibility.

Live snapshot after PAY-2026-000041 • all figures system-calculated

ACTIVE BUDGET

MYR 121,000

Live approved budget

ACTUAL SPENDING

MYR 76,000

Authoritative ledger

ACTIVE COMMITMENTS

MYR 109,000

Active reservations

AVAILABLE

-MYR 64,000

Over committed — surfaced, not hidden

PAID THIS PERIOD

MYR 56,000

Immutable payment records

REQUESTS PROCESSED

4

Completed operational workload

Negative Available is displayed on the live dashboard — AIMS surfaces budget pressure instead of concealing it.

Financial truth first. AI explanation second.

SYSTEM CALCULATED

Finance Dashboard

Paid This Period

MYR 56,000.00

4 requests processed • immutable payment records

EVIDENCE-BOUNDED AI

“What is the total financial impact of payments made this period?”

“Total financial impact (sum of provided paid amounts) for the selected period is MYR 56000.00.”

Ask AIMS answered from bounded, authorized evidence — the same figure the deterministic dashboard already showed. It is not a general chatbot and cannot run arbitrary queries.

Intelligent control, not maximum automation.

CONTROL

Financial truth before
payment

Integrity

EFFICIENCY

One workflow, not
fragmented checking

Efficiency

INTELLIGENCE

AI turns evidence into
decision support

Continuous Learning

GOVERNANCE

Humans and Finance retain
authority

Teamwork

VISIBILITY

Every payment updates the
financial picture

Customer First

From Request. To Control. To Financial Intelligence.

AIMS

What AIMS is actually built on.

Frontend	Next.js / React
API	NestJS • REST • strict DTO validation
Database	PostgreSQL • append-only history • lifecycle triggers
Worker	PostgreSQL-backed outbox worker (no Redis/BullMQ runtime dependency)
AI Provider	OpenAI-compatible • schema-validated structured outputs (Zod)
Document Storage	Local adapter for development/demo — production S3-class storage is a stated prerequisite
Notifications	Web domain commands + optional Telegram adapter — Telegram never owns approval logic

Note: an early architecture plan specified Nuxt/Vue and Redis+BullMQ. The team deliberately revised this during implementation — a documented trade-off, not an inconsistency.

AI is optional. The workflow never depends on it.

AI ON / OFF

Master switch + per-capability flags
Document Validation, Financial Risk,
Spending Pattern, Compliance,
Finance Watch, Ask AIMS — each toggled
independently

Manual Fallback

Three modes: AI-Assisted, Manual,
AI-Unavailable Fallback
Deterministic Finance Dashboard
always remains available

Evidence & Authority

Every AI result is schema-validated
Human assessment always preserved
Source tagged AI / MANUAL / RULE_BASED
AI never gains autonomous authority

Observed in this environment: several AI sub-agents experienced provider timeouts during rehearsal. The product is designed to fail safely — deterministic paths and human review remain available when AI does not respond.

Controls that make AIMS auditable.

Role / Permission Matrix

Database-backed RBAC across Dashboard, Request, Validation, Finance, Approval, Payment, Reporting

Approval Matrix & Delegation

Configurable approval routing with delegation support

Final Finance Control

A separate deterministic gate after Approval — checks authority, evidence, amount, duplicates

Immutable Audit Trail

Append-only history with lifecycle triggers

Payment Idempotency

Duplicate-payment detection blocks silent re-execution

Database Trust Boundaries

Authorization is never trusted from the frontend alone
